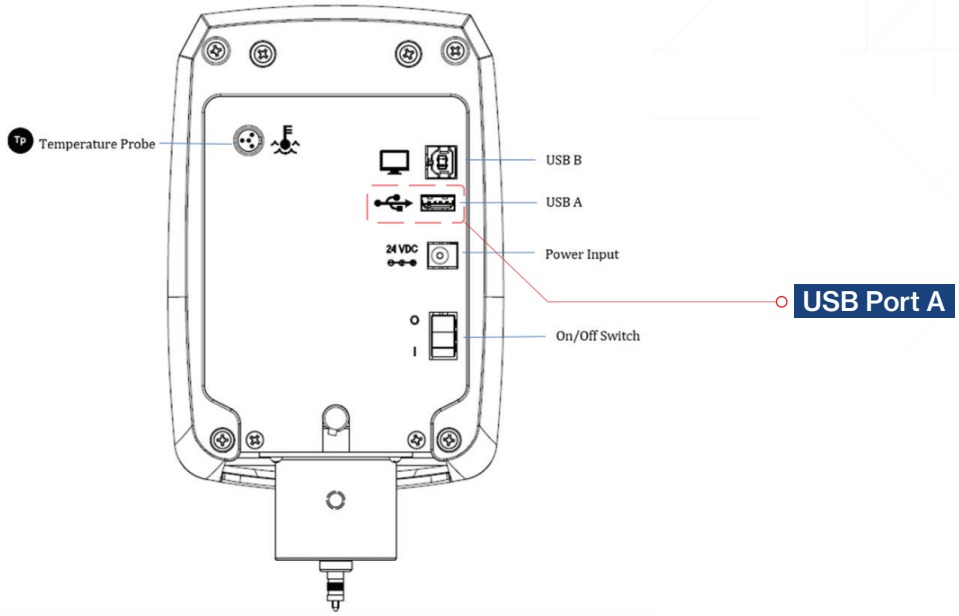
DVPlus Firmware Update

Steps to update firmware

WARNING: It is critical to only install Firmware intended for the DVPlus on your instrument. Please ensure that no other .fwu files exist on your USB Flash Drive and that the only firmware files that exist are those you are trying to install.

1. Insert a USB Flash Drive (FAT32 Format) with the Firmware Update loaded in the root folder into the USB A Port on the back of the DVPlus. DO NOT Remove the USB Flash Drive at any point during the upgrade.



2. Turn the DVPlus On.
3. Level and AutoZero accordingly.
4. Go to Settings Menu and select Firmware Update.

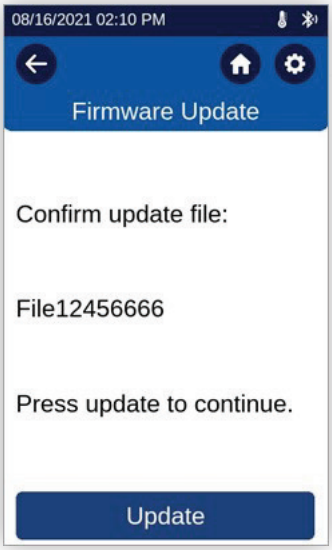
5. Select the desired Firmware version from the USB Drive.

6. DVPlus will have you confirm your choice.



7. Press Update and the DVPlus will automatically update the firmware to the desired selection. When the update is complete, the DVPlus will automatically reboot. DO NOT Remove the USB Flash Drive at any point during the update.
